The cooling rate for the precipitation heat treatment process of Al-copper alloys is:

Question 8

Not yet answered

Marked out of 3.00

Flag question

The severity of quenching media from low to high can be ranked as follows:

Select one:

- a. insulating material or furnace, air, vegetable oil, animal oil, mineral oil, warm water, cold water,
  20% brine, 5% caustic soda
- b. 5% caustic soda, 20% brine, cold water, animal oil, warm water, animal oil, mineral oil, vegetable oil,
  air, insulating material or furnace
- c. insulating material or furnace, air, vegetable oil, animal oil, mineral oil, cold water, warm water,
  20% brine, 5% caustic soda
- d. 5% caustic soda, cold water ,20% brine, warm water, animal oil, mineral oil, vegetable oil, air,
  insulating material or furnace.

Question 9

Question 6
Answer saved
Marked out of 2.00
Flag question

The recommended heat treatment process for the hacksaw is:

Select one:
- a. annealing
- b. Normalizing+harening
- c. hHardening
- d. Normalizing

Clear my choice

Dendrite can be seen clearly in the microstructure of the castings if the alloy:

ct one:
s pure
s impurity atoms

Clear my choice

The temperature of the formation of martensite in the CCT:

Select one:

- a. is more than that for TTT diagram
- b. is the same as for TTT diagram
- c. is shifted to the right
- d. is less than that for TTT diagram

Clear my choice

The cooling rate for the solution heat treatment process of Al-copper

Select one:

- a. slow
- b. Very fast
- c.]moderate
- d. no matter

Answer saved

Marked out of 2.00

Flag question

The body centered tetragonal crystal structure is:

Time left **0:09:03**

Select one:

- a. when a=b=c and has an atom in the center
- b. when a=b=c and has an atom in the center and another on the surface
- c. when a=b=c and has an atom on the surface
- d. when a=b≠c and has an atom in the center

Clear my choice

Question **3**

Answer saved

Ernest Samuels

أسئلة طرحها الآخرون

Why bainite does not form during continuous cooling in plain carbon steel?

How is bainite formed?

Bainite forms by the decomposition of austenite at a temperature which is above MS but below that at which fine pearlite forms. All **bainite** forms below the T0 temperature.

Flag question

Bainitic microstructure in eutectoid plain carbon steel can be formed by using continuous cooling diagram if

Select one:

- a. the cooling rate goes after the critical point
- b. the cooling rate passes through the critical point
- c. the cooling rate goes before the critical point
- d. none of the choices

Question 3

Not yet answered

Flag question

Spherodite microstructure in eutectoid plain carbon steel can be formed by using isothermal transformation process if

Select one:

- a. cooled to above the critical temperature or lower to it and left for 10^4 seconds
- b. cooled to lower the critical temperature only and left for 10^4 seconds
- c. cooled to the critical temperature only and left for 10^4 seconds
- d. cooled to above the critical temperature only and left for 10^4 seconds

Dendrite can be seen clearly in the microstructure of the castings if the alloy

Select one:
- a. is radio active
- b. has impurity atoms
- c. is pure
- d. is magnetized

Question 5

Select one:

- a. A result of the perfection in the lattice
- b. A result of the distortion in the lattice
- c. A result of the formation of a Ms-like structure
- d. A result of Alpha phase formation

Clear my choice

The recommended heat treatment process for the car body is:

Select one:

- a. normalizing + hardening
- b. normalizing
- c. annealing
- d. Hardening

A method of getting a mixture of Pearlite (P), Bainite (B) & Martensite (M) in an eutectoid steel is:

Select one:

- a. Cooling to a temperature above the border line of P and B, crossing the transformation starts line and soaking to a certain time, cooling it to below the border line, soaking to a certain time but not to cross the transformation ends line, then quenching
- b. Cooling to a temperature above the border line of P and B, crossing the transformation ends line and soaking to a certain time, cooling it to below the border line, soaking to a certain, then quenching
- c. Cooling to a temperature below the border line of P and B, crossing the transformation starts line and soaking to a certain time, then quenching
- d. Cooling to a temperature below the border line of P and B, crossing the transformation starts line and soaking to a certain time, soaking to a certain time but not cross the transformation ends line, then quenching

The tensile strength (TS) of steel can be predicted for the steel with a composition till eutectoid composition by the following formula:

Select one:

- a. TS = 700*%carbon+350
- b. TS = 750*%carbon+350
- c. TS = 750*%carbon+300
- d. TS = 700*%carbon+300
